Tempe, Arizona 85281

ABSTRACT

Lethal time seems to have limited use as a measure of venom potency.

LETRAL TIME AS A MEASURE OF VENOM POTENCY*

Venoms from the scorpion <u>Centruroides sculpturatus</u> Ewing and gila monster <u>Heloderma suspectum</u> Cope were used in studying lethal time as an index of venom lethality to mice.

MATERIALS AND METHODS

Raw venom samples were prepared as described previously (1).

 ${\rm LD_{50}}^{\circ}{}_{8}$ were calculated by the Thompson and Weil method (2). The assay animals were NAMRU albino swiss mice. These animals had no food for 24 hours and no water for two hours before weighing. After weighing, they were injected I.P. Food and water were made available two hours after injection. Observations after injection were for 24 hours.

The statistical test employed was the nonparametric Mann-Whitney U Test (3). Each comparison made assumed a two tailed test and a significance level of 0.05. This test compared two independent samples and the only assumption made is that the samples are random.

^{*} Supported by U.S. Army grant DA 49-092-ARO-88, Item 2.

RESULTS

C. sculpturatus and H. suspectum venom LD₅₀ in mice were 1.5 (1.1-1.9) mg and 3.0 (2.1-4.2) mg of venom per Kg of mouse, respectively. There was a significant difference in the lethal times for the two venoms (Table 1). At the 2 LD₅₀ dosage level C. sculpturatus venum evoked lethal times within a relatively narrow range. This relationship was not apparent with H. suspectum venom. Thus, further tests with H suspectum venom at increased dosage levels did not seem practical. Responses to C. sculpturatus venom in mice at increased dosage levels were studied (Table 2). When these dosage levels were plotted against mean lethal time a linear relationship could be approximated (Figure 1).

DISCUSSION

The response of a test animal varies with the type of venom injected. C. sculpturatus venom elicits convulsions and heavy salivation in the recipient. H. suspectum venom causes hypoactivity accompanied by respiratory and cardiac failure in the recipient. These venoms, however, have approximately the same LD₅₀ when injections are made I.P. If lethal time is a measure of lethality per se the two venoms should have the bulk of their lethal time about equal. This was not observed. Increased dosages of scorpion venom decreased the lethal times in mice. Thus, lethal time might indicate the amount

of venom injected.

ACKNOWLEDGMENTS

I thank Bob D. Johnson for his assistance and suggestions during this work.

- 1. ORIGINATING ACTIVITY: Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization (corporate author) issuing the report.
- 2a. REPORT SECURITY CLASSIFICATION: Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.
- 2b. GROUP: Automatic downgrading is specified in DoD Directive 5200.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 3 and Group 4 as authorized.
- 3. REPORT TITLE: Enter the complete report title in all capital letters. Titles in all cases should be unclassified. If a meaningful title cannot be selected without classification, show title classification in all capitals in parenthesis immediately following the title.
- 4. DESCRIPTIVE NOTES: If appropriate, enter the type of report, e.g., interim, progress, summary, annual, or final. Give the inclusive dates when a specific reporting period is covered.
- 5. AUTHOR(S): Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch of service. The name of the principal author is an absolute minimum requirement.
- 6. REPORT DATE: Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.
- 7a. TOTAL NUMBER OF PAGES: The total page count should follow normal pagination procedures, i.e., enter the number of pages containing information.
- 7b. NUMBER OF REFERENCES: Enter the total number of references cited in the report.
- 8a. CONTRACT OR GRANT NUMBER: If appropriate, enter the applicable number of the contract or grant under which the report was written.
- 86, &c, & 8d. PROJECT NUMBER: Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.
- 9a. ORIGINATOR'S REPORT NUMBER(S): Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.
- 96. OTHER REPORT NUMBER(S): If the report has been assigned any other report numbers (either by the originator or by the sponsor), also enter this number(s).

- 10. AVAILABILITY/LIMITATION NOTICES: Enter any limitations on further dissemination of the report, other than those imposed by security classification, using standard statements such as:
 - "Qualified requesters may obtain copies of this report from DDC."
 - (2) "Foreign announcement and dissemination of this report by DDC is not authorized."
 - (3) "U. S. Government agencies may obtain copies of this report directly from DDC, Other qualified DDC users shall request through
 - (4) "U. S. military agencies may obtain copies of this report directly from DDC. Other qualified users shall request through
 - (5) "All distribution of this report is controlled. Quanified DDC users shall request through

If the report has been furnished to the Office of Technica. Services, Department of Commerce, for sale to the public, indicate this fact and enter the price, if known

- 11. SUPPLEMENTARY NOTES: Use for additional explanatory notes.
- 12. SPONSORING MILITARY ACTIVITY: Enter the name of the departmental project office or laboratory sponsoring (paying for) the research and development. Include address.
- 13. ABSTRACT: Enter an abstract giving a brief and factual summary of the document indicative of the report, even though it may also appear clsewhere in the body of the technical report. If additional space is required, a continuation sheet shall be attached.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (5), (C), or (U),

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. KEY WORDS: Key words are technically meaningful terms or short phrases that characterize a report and may be used as index entries for cataloging the report. Key words must be selected so that no security classification is required. Identies, such as equipment model designation, trade name, military project code name, peopraphic location, may be used as key words but will be followed by an indication of technical context. The assignment of links, rules, and weights is optional.
